Why Do We Use DW or Dreamweaver ?

Let's talk about what I do think about DW. I think it is a good graphical web design environment for beginners or for small website projects.

Here is why DW is likely to be used.

Code Highlighting, Code Suggestion, Code and Design View, Code Validation and Accessibility Checks, File Manager, Dreamweaver Templates, Tabs and Connected Files, New Exciting Things with CS5

Why you should move to VSCode or Atom or even VIM if you a terminal person

Confusing Interface, Steep Learning Curve, The WYSIWIG lies, Bulky Dynamic Code, Badly Written Code Snippets, Undefined CSS Styling (pre CS4), Not in Full Control of your Code, 10% of Full Functionality Actually Useful, Makes for Lazy Web Designers, Very Expensive

DW cost £419.48 this is more than my Laptop price. All other code editors are free!!!
